Cloutomate

GitLab & Cloutomate: DevSecOps from a single source: flexible, secure, integrated

GitLab combines everything that modern software development needs: repository, CI/CD, security scans and infrastructure control. No tool confusion, no breaks in the process. And with Cloutomate, GitLab runs in exactly the way that makes the most sense for your company: in your own environment, managed by us or as a hybrid solution.

GitLab: One platform for everything

Code & Collaboration: Git repository with issue tracking, merge requests, and code reviews."

CI/CD: Automated pipelines for builds, tests, and deployments ensure that code changes can be tested and deployed right away

Security & Compliance: Scans for code, dependencies, and containers are integrated into the development process.

Infrastructure-and-Configuration-as-Code & GitOps: Manage deployments and configurations directly from GitLab.

GitLab Runners: Run CI/CD jobs flexibly – on your own infrastructure, in the cloud, or in a hybrid setup.

Cloutomate + GitLab = DevSecOps the way it should be.

Get more out of GitLab with Cloutomate: technically sound, securely operated, and tailored to fit your processes.

- **Setup & Migration:** We smoothly migrate your existing repositories, projects, and pipelines to GitLab – with zero downtime and no data loss.
- **CI/CD & Automation:** We design your pipelines to run reliably, repeatably, and with long-term maintainability.
- **Kubernetes Orchestration:** Whether you're setting up a new cluster or working with an existing environment – we integrate Kubernetes directly into GitLab and make deployments controllable via click or GitOps.
- **Backup & Restore:** Regular backups, tested restore procedures, and transparent recovery plans – for maximum resilience and full compliance.

Three reasons why GitLab does more for you with Cloutomate

Whether it's integration, operations, or further development – we approach GitLab from your perspective. With solid technical expertise, flexible implementation, and one goal in mind: making it work in your day-to-day reality.

Designed for flexible use	**Thoughtfully engineered**	**Up and running in no time**
• GitLab runs where it fits your infrastructure best: self-managed, managed, or hybrid • Integrated into existing system landscapes – not just another tool in the zoo • Scalable from small dev teams to full enterprise setups	• Automated CI/CD, Kubernetes orchestration, and GitOps • Backup and restore strategies, regularly tested • Security and compliance requirements always in focus	• Seamless migration from existing tools and repositories • Setup, operations, and maintenance from a single source • Enablement and best practices tailored to your teams

Why Cloutomate?

Efficiency: Quick-to-deploy solutions without unnecessary complexity.

Experience: Deep GitLab expertise and hands-on knowledge of how to make it work best.

Security: Tailored concepts for reliable protection and high performance.

Some just see a tool. We see the solution that fits you.

Looking for more than just a tool? Looking for real results?
Let's make it happen – together.
